

**Chief Complaint (CC)****Date: October 2015**

49 y/o AA male presents with relapsed multiple myeloma.

**History of Present Illness (HPI)**

Pt was initially diagnosed with ISS stage 2 IgG kappa multiple myeloma in May 2009

- Received bortezomib and dexamethasone (Vd) induction for 6 cycles, achieving CR
- Pt declined ASCT, but stem cells were collected at the time

Pt continued Vd until relapse in December 2011

- Received lenalidomide and dexamethasone (Rd), achieving a PR
- Continued Rd until biochemical relapse in September 2013

Pt received ASCT in October 2013, achieving VGPR, but declined maintenance therapy

- Pt relapsed in July 2014, and received pomalidomide, cyclophosphamide and dexamethasone (PomCyDex); duration of response was about 10 mo

Pt was started on daratumumab monotherapy in May 2015, but patient relapsed again in October 2015
